

I will now show you a cool backup function for your drawing files and plans that is only available in Allplan Share projects. Allplan creates 3 backup versions of all drawing files and plans whose contents have been changed. The oldest version is overwritten after the fourth change to a content. This means you have data security in a cloud environment and can easily restore these backup versions at any time if required - here in the building structure. To do this, simply click on a specific drawing file (the drawing file must not be switched on, not even passively) and select: Replace drawing file. Then select the appropriate version - the folder name contains the backup date and time - and you're done

The Replace drawing file function is also available in normal Allplan projects, but the 3 backup versions are only available in Share projects.

Right click on the drawing file then select "Replace drawing file"
